

WHY CHOOSE BLUE SKY ENERGY SOLAR BOOST™ CHARGE CONTROLLERS

Blue Sky Energy was the leading force in developing Maximum Power Point Tracking charge controllers in the late 90's. While we started our business in 1993, we changed the direction of our company in 1998 to focus on the renewable energy market.

Our customers choose Blue Sky Energy Solar Boost charge controllers because we are a quality driven, customer oriented company. We currently focus on the small to medium sized applications and work both with a wholesale distribution channel as well as direct with OEM applications. We enjoy working with our OEM partners to help them produce a product that incorporates our Solar Boost MPPT technology into a specialized brand often with custom modifications just for them.

Our products are versatile and lend themselves to a variety of applications for both consumer use as well as industrial or commercial. The RV and Marine consumers select Solar Boost charge controllers because of the reputation we have gained over the years of providing reliable products with consistent quality at affordable prices. Our industrial customers choose Solar Boost products because they know the quality is built in, customer service is outstanding and our products fit their budget when looking for an MPPT charge controller. Customer service is available 7 days a week. We understand that waiting until office hours on Monday are not necessarily convenient if the install is in a remote location on a weekend!

Our next generation technology employs our popular MPPT technology combined with our high speed digital network in our IPN (Integrated Power Network) based products. IPN based products in addition to serving as great solar charge controllers, include dusk to dawn lighting control, load control and additional battery charging. New in 2009 is our SB3024iL DUO-Option solar/wind or hydro control. Add the DUO-Option and combine both MPPT solar charging and diversion type wind or hydro in one controller, performing both solar charging and diversion control at the same time. Once again, Blue Sky Energy brings to the marketplace a popular product with new options to keep costs down and yet all the proven reliability our customer have come to expect when choosing Solar Boost charge controllers.
